

Lab. – Regression :

House Sale Price Prediction Challenge

Yuan-Fu Liao

National Yang Ming Chiao Tung University

yfliao@nycu.edu.tw

房價預測 (回歸模型)

- 任務
 - 用train.csv跟valid.csv訓練模型（一行是一筆房屋交易資料的紀錄，包括id, price與21種房屋參數）
 - 將test.csv中的每一筆房屋參數，輸入訓練好的模型，預測其房價
 - 將預測結果上傳到Kaggle（從“Submit Predictions”連結）
 - 看系統幫你算出來的Mean Abslute Error（MAE，就是跟實際房價差多少，取絕對值）分數夠不夠好？
 - 嘗試改進預測模型
- 討論
 - 資料分析
 - 做法
 - 程式寫法
 - 結果分析
 - 檢討與改進

作業進行方式

- 使用Kaggle與Github的教室平台
 - 把結果放到Kaggle (submission) 上排名
 - 把程式與報告放到Github (至少要有README.md (報告), 程式 train.sh, test.sh, 設定 requirement.txt與報告)
- 以邀請碼 (另外通知) 連結申請Kaggle帳號，並以“學號+姓名”，當你的帳號名稱帳號 (名稱需與Github的帳號相同)：
 - 建帳號時要跟課程學生名單上你的學號連結
 - 與你的github帳號關連
- 以邀請碼 (另外通知) 連結申請GitHub帳號，並以“學號+姓名”，當你的帳號名稱 (名稱需與Kaggle的帳號相同)
 - 建帳號時要跟課程學生名單上你的學號連結
 - 與你的Kaggle帳號關連

Description

Please use the given house features to predict its sale price.

Evaluation

The given database for training a sale price predictor contain house sale prices for somewhere out there with 19 house features plus the price and the id columns.

[+ Add Page](#)

此次作業是使用回歸模型做房價預測，你們要做的是：

1. 用train.csv跟valid.csv訓練模型（一行是一筆房屋交易資料的紀錄，包括id, price與19種房屋參數）
2. 將test.csv中的每一筆房屋參數，輸入訓練好的模型，預測其房價
3. 將預測結果上傳（從“Submit Predictions”連結）
4. 看系統幫你算出來的Mean Absolute Error（MAE，就是跟實際房價差多少，取絕對值）分數夠不夠好？
5. 嘗試改進預測模型

程式要放到Github Classroom

報告要包括：

1. 做法說明
2. 程式方塊圖與寫法
3. 畫圖做結果分析
4. 討論預測值誤差很大的，是怎麼回事？
5. 如何改進？

Data Description

Edit

This database contains house sale prices for somewhere out there with 21 house attributes plus the price and the id columns.

File descriptions.

1. train-v3.csv - the training set.
2. valid-v3.csv - the validation set.
3. test-v3.csv - the test set sample.
4. Submission.csv - a sample submission file in the correct format.
5. metaData.csv - supplemental information about the data.

Machine Learning@NTUT - Regression 2018

House Sale Price Prediction Challenge

18 days to go

Overview Data Kernels Discussion Leaderboard Rules Team Host My Submissions [Submit Predictions](#)

Make a submission for [yfliao](#)

You have 10 submissions remaining today. This resets 18 hours from now (00: 00 UTC).

Step 1

Upload submission file

File Format

Your submission should be in CSV format.
You can upload this in a zip/gz/rar/7z archive, if you prefer.

Number of Predictions

We expect the solution file to have 6485 prediction rows. This file should have a header row. Please see sample submission file on the [data page](#).

Step 2

Describe submission

B / | 🔗 “ </> 🖼️ | ☰ ☷ H | ↺ ↻

 Styling with Markdown supported

Briefly describe your submission.

Make Submission

Example: Boston House Price Dataset

Dataset Characteristics:

Multivariate

Attribute Characteristics:

Categorical, Integer, Real

Associated Tasks:

Regression

Number of Instances: 506

Number of Attributes: 14

Missing Values? No

Area: N/A

Date Donated 1993-07-07

Number of Web Hits: 328614

Attribute Information:

1. CRIM: per capita crime rate by town
2. ZN: proportion of residential land zoned for lots over 25,000 sq.ft.
3. INDUS: proportion of non-retail business acres per town
4. CHAS: Charles River dummy variable (= 1 if tract bounds river; 0 otherwise)
5. NOX: nitric oxides concentration (parts per 10 million)
6. RM: average number of rooms per dwelling
7. AGE: proportion of owner-occupied units built prior to 1940
8. DIS: weighted distances to five Boston employment centres
9. RAD: index of accessibility to radial highways
10. TAX: full-value property-tax rate per \$10,000
11. PTRATIO: pupil-teacher ratio by town
12. B: $1000(B_k - 0.63)^2$ where B_k is the proportion of blacks by town
13. LSTAT: % lower status of the population
14. MEDV: Median value of owner-occupied homes in \$1000's

The screenshot displays the GitHub Classroom interface for a course titled "Machine Learning@NTUT - 2017". The interface includes a sidebar with navigation options: "Classroom settings", "Classroom profile", "Invite other administrators", and "Roster management" (which is currently selected). The main content area is titled "Classroom roster" and features a "New student" button in the top right corner. A modal dialog box is open in the center, titled "Select a student to link with", with a close button (X) in the top right corner. The dialog contains the text "Select a student from your roster to link this GitHub account to" and lists two student IDs: "103310073" and "103310010". Below the dialog, the roster table is visible, showing three students with their GitHub avatars and usernames: "@106318028chiao", "@105318099", and "@gillian120". Each student row has a "Link to student" button to its right.

Quick setup — if you've done this kind of thing before

[Set up in Desktop](#) or [HTTPS](#) [SSH](#) 

We recommend every repository include a [README](#), [LICENSE](#), and [.gitignore](#).

...or create a new repository on the command line

```
echo "# Regression-yfliao" >> README.md
git init
git add README.md
git commit -m "first commit"
git remote add origin https://github.com/MachineLearningNTUT/Regression-yfliao.git
git push -u origin master
```

...or push an existing repository from the command line

```
git remote add origin https://github.com/MachineLearningNTUT/Regression-yfliao.git
git push -u origin master
```

...or import code from another repository

You can initialize this repository with code from a Subversion, Mercurial, or TFS project.
